

To Whom It May Concern:

Hereby we confirm that Fast SA was contracted for Project Edvard Grieg.

The Edvard Grieg platform substructure will consist of a four legged launch-installed jacket steel structure with a vertical clean face towards platform south to allow access for a jack-up drilling unit. A pre-drilling deck will be installed on top of the jacket after it has been piled to the seabed.

We can highly recommend the good cooperation with Fast SA, since all contracted works have been organized and carried out to our full satisfaction. We wish to acknowledge high standard of performance and professionalism exhibited by subcontractor FAST SA on the Edvard Grieg project:

- Project management service carried out by dedicated and professionally trained, dedicated Project Manager;
- Support on every stage of the project at area of anticorrosion protection;
- Cleaning and painting;
- Application of Passive Fire Protection - CHARTEK 7;

All activities mentioned above, FAST SA performed with supreme quality and with reference to the highest standards of work and work management. FAST SA showed its ability to collaborate as team player and was always flexible when required.

FAST SA is a company that Vistal Offshore recommends basing on experience from the Edvard Grieg project. We are fully convinced that FAST SA is capable and prepared to accommodate technical demands in order to meet international standards. Therefore FAST SA is a trustful partner and may be invited to participate in demanding projects where up-to-date knowhow and techniques are required.

Sincerely,

VISTAL OFFSHORE Sp. z o.o.
