Public spaces

Fast SA, as a partner of Crist SA, has just completed comprehensive works concerning surface protection, insulation and interiors outfitting onboard expert barge BN 105 built for French owner NRL – VIADUC belonging to VIVCI group. The scope of work included complex delivery, assembly and documentation of interior outfitting, electrical systems, HVAC and piping systems. The scope of outfit-

ting works, including furniture production, contained premises of both superstructures such as mess, galley, crew cabins, offices, conference room, hospital, changing room and public toilets. Additionally we also outfitted technical rooms adjacent to the superstructure - Waste Store, Mechanical Workshop, Electrical Workshop, Deck Store, Warehouse, Store for Cl. Acc. & Surv. Equip., Dry Store as well as Aft Control

Room. At the end of March 2016 the barge was forwarded to the owner and loaded on the deck of Hawk, flo-flo vessel dedicated for transporting outside loads, left to La Réunion island, which is overseas department of France located on the Indian Ocean. Due to its intended purpose the barge will be used for building the longest French coastal highway along the island coast.
