Retail service store

We carry on works concerning the project of mBank retail stores outfitting. We signed two agreements for two different stores formats. The second contract – for bigger offices, with extended scale – is an effect of satisfying cooperation during smaller locations outfitting. The scope of work includes delivery and installation of free standing units and wall casings. The project is distinguished by interesting modern forms and, at the same time, and the process of designing and documentation preparation

requires extensive professional competence and experience from the constructors. Furniture manufacturing also demands excellent skills from carpenters and reliable, well developed machinery. What also distinguishes the project, in comparison with other POS realisations, is adapting the same interior outfitting to individual, variable interiors – dependent of surface and location of bank section.
